EDUCATION

Tongji University, Shanghai **September, 2017-June, 2021**

B.Eng in Mechanical Engineering ***GPA**: 4.77/5.00 or 92.68/100 (1/131)*

— **Scholarship**: Double National Scholarship (1%) and one Die Hirschvogel Schorlarship

— **Supervisor**: Prof. Changhong Fu (Director of **Vision4Robotics Group**)

Tsinghua University, Beijing **August, 2020-September, 2020**

Visiting Student in Department of Automation

— **Supervisor**: Prof. Geng Lu (Director of UAV Lab)

RESEARCH INTEREST

Present: Unmanned Aerial Vehicle, Computer Vision, Object Tracking

Future: Robotics, Pose Estimation, 3D Computer Vision

RESEARCH EXPERIENCE

Improving UAV Tracking Accuracy by Regularization Modification **June, 2019-Present**

- Exploited the automatic adaptation of spatio-temporal regularization for correlation filters optimization. Local and global properties of detection-oriented response map are employed to elevate the robustness of trackers. (accepted by *CVPR 2020*)
- Proposed multi-view selection mechanism to leverage memory augmentation for correlation filters to alleviate exponential decay of information. Perception hash algorithm is adopted to calculate the similarity of patches and decide whether to update the memory. (accepted by *IROS 2020*)
- Presented target-aware dual filter learning for anti-dark UAV tracking. High-speed low-light enhancement in conjunction with pixel-level mask enable model focus on target appearance while dual filter mutually constraint to avoid filter degradation. (submitted to *ICRA 2021*)

Developing Real-Time and Robust Aerial Tracker on a Single CPU **November, 2019-Present**

- Presented distractor repressed dynamic regression tracker. The local maximum points in response map are used to localize the distractors and the regression label of objective function is dynamically adjusted by element-wise penalization of distractors. (accepted by *IROS 2020*)

- Proposed joint scale and aspect ratio optimization by training separate filer in size domain. Inspired by two-stage object detection methods, a novel object proposal based re-detection strategy is presented to cope with long-term tracking tasks. (accepted by *IROS 2020*)
- Investigated appearance variation information to adaptively generate a spatial reliability map. A response pool is proposed as a standard of comparison to measure the stability of response map and influence its spatial reliability. (submitted to *IEEE Trans. Multimedia*)

Exploring Deep Learning Methods for Visual Object Tracking **May, 2019-Present**

- Investigated integration of two complementary types of methods, *i.e.,* end-to-end trackers and correlation filter-based approaches to obtain CPU-friendly and high-performance trackers.
- Proposed to train domain translation model based on Generative Adversarial Networks (GANs) to generate multi-modal (RGB-T or RGB-D) tracking datasets using original visible spectrum data.
- Applied deep learning-based low-light image enhancement methods to tracking paradigm for dark scenes. A novel benchmark used for evaluating trackers in dark scenes is currently made.

Vision-Based UAV Localization under Air-Ground Robots Coordination **May, 2019-Present**

- Deigned a benchmark system that enables the evaluation of visual object tracking methods on UAV localization under air-ground robot coordination scenarios. Specifically, ground-truth positions were obtained from motion capture system and the estimated results were output from ROS.
- Validated the effectiveness of various object tracking in accurate localization of drone. Visual trackers are assigned to predict markers' positions in image domain while classical framework of UAV pose estimation is adopted to estimate the trajectory of UAV in world frame.

- Junjie Ye, Changhong Fu, Fuling Lin, **Fangqiang Ding**, Shan An and Geng Lu. *Multi-Regularized Correlation Filter for UAV Tracking and Self-Localization*, submitted to IEEE Transactions on Industrial Electronics. Under review.

Magazine

- Changhong Fu, Bowen Li, **Fangqiang Ding**, Fulin Li and Geng Lu. *Correlation Filter for UAV-Based Aerial Tracking: A Review and Experimental Evaluation*, submitted to IEEE Geoscience and Remote Sensing Magazine. Under review.

SELECTED PROJECT

Zeal Eco-Power Racing Vehicle Team **October, 2018-Present**

- Participate in designing vehicle velocity measurement and oil cut-off system.
- Developed mobile APP for the visualization of vehicle state parameters and driving control.
- Equipped racing vehicles with perception ability using computer vision algorithms.

Developing Intelligent Following Umbrella **January, 2019-May, 2019**

- Proposed to calculate pedestrian position by UWB multi-module communication.
- Exploited controlling motors directly to simulate the remote controller.
- Incorporated our designed novel umbrella for implementation.

ACADEMIC SERVICE

IROS 2020	Reviewed three submissions
IEEE JSTSRS	Reviewed one submission
IEEE TCYB	Reviewed two submission
IEEE TPAMI	Reviewed one submission
CAA PRE-IROS 2020 ONLINE	Present two papers

AWARD

- First Prize of Tongji Undergraduate Mathematics Competition (top 10) **June, 2018**
- First Prize of Shanghai College Student Innovative Design Competition (top6) **May, 2018**
- Second Prize of Shanghai College Student Physics Competition **December, 2018**
- Second Prize of Tongji Undergraduate Physics Competition **May, 2018**
- Third Prize of Chinese Undergraduate Mathematics Competition **October, 2018**
- Third Prize of Chinese Undergraduate Mathematics Modelling Competition **November, 2018**
- Third Prize of Shanghai Undergraduate Mathematics Competition **November, 2018**
- Excellent Student Award in Tongji University **December, 2018**
- Third Prize in Shanghai Mechanics Competition **May, 2019**
- Excellent Student Award in Tongji University **December, 2019**
- Undergraduate Academic Star in Tongji University (10/18115) **December, 2020**

KEY SKILL

Programming Language	Matlab, Python, C++, Java, HTML
Developing&Simulation Tools	Keil, Linux, ROS, Android Studio, Multisim LaTeX, Adobe Premiere Pro, AutoCAD, Solidworks, Autodesk Inventor
